Chapter 1	OGCMs and MRI.COM	1
1.1	What do OGCMs cover? . . . . .	1
1.2	Classification of OGCMs . . . . .	1
1.3	About MRI.COM . . . . .	3
1.4	Future of OGCMs and MRI.COM . . . . .	3
<b>Part I Configuration</b>		<b>5</b>
Chapter 2	Governing Equations	7
2.1	Formulation . . . . .	7
2.2	Numerical Methods . . . . .	14
2.3	Appendix . . . . .	18
Chapter 3	Spatial grid arrangement	21
3.1	Horizontal grid arrangement . . . . .	21
3.2	Vertical grid arrangement . . . . .	21
3.3	Grid indices and model domain . . . . .	22
3.4	Calculation of horizontal grid cell area and width . . . . .	23
3.5	Calculation of vertical cell thickness . . . . .	27
3.6	Usage . . . . .	29
Chapter 4	Time integration	35
4.1	Time integration flow . . . . .	35
4.2	Leap-frog method (LF) . . . . .	35
4.3	Leap-frog Adams-Moulton (LFAM3) method . . . . .	36
<b>Part II Diagnostic Equations</b>		<b>45</b>
Chapter 5	Equation of State	47
5.1	Basics of the equation of state . . . . .	47
5.2	An equation of state used by MRI.COM . . . . .	48
Chapter 6	Continuity equation	53
6.1	Semi-discrete form of the continuity equation . . . . .	54
6.2	Finite difference expression for the T-cell continuity equation . . . . .	54
6.3	Finite difference expression for the U-cell continuity equation . . . . .	55
<b>Part III Equations of Motion</b>		<b>59</b>
Chapter 7	Equations of motion (barotropic component)	61
7.1	Overview of mode splitting . . . . .	61
7.2	Governing equations of the barotropic submodel . . . . .	61
7.3	Time integration on barotropic time levels . . . . .	62
7.4	Prognostication of state variables at the baroclinic time level . . . . .	64
7.5	Time-average weighting function . . . . .	65
7.6	Horizontal diffusivity of sea surface height (option) . . . . .	66
7.7	The momentum equation modified by the mode splitting . . . . .	67

7.8	Usage	69
Chapter 8	Equations of motion (baroclinic component)	71
8.1	Advection terms	71
8.2	Pressure gradient term	81
8.3	Viscosity	83
8.4	Coriolis term	88
8.5	Usage	88
<b>Part IV</b>	<b>Evolution of tracers</b>	<b>91</b>
Chapter 9	Tracer advection-diffusion equation	93
9.1	The advection-diffusion equation	93
9.2	Boundary conditions	94
9.3	Various tracers	94
Chapter 10	Tracer advection schemes	95
10.1	Finite volume or flux form method	95
10.2	Weighted upcurrent scheme	96
10.3	QUICK and QUICKEST schemes	97
10.4	UTOPIA for horizontal advection	101
10.5	Second Order Moment (SOM) scheme	107
10.6	Piecewise Parabolic Method (PPM) scheme	114
10.7	MPDATA scheme	118
Chapter 11	SGS parameterization of lateral mixing of tracers	123
11.1	Introduction and Formulation	123
11.2	Horizontal diffusion	124
11.3	Isopycnal diffusion	125
11.4	Gent and McWilliams parameterization for eddy-induced transport	129
Chapter 12	SGS parameterization of vertical mixing of tracers	137
12.1	Vertical diffusion	137
12.2	Convective adjustment	138
Chapter 13	Tracer Package Structure and Usage	143
13.1	Program package structure	143
13.2	Handling the initial state	144
13.3	Configuration of tracers	144
<b>Part V</b>	<b>Boundary Processes</b>	<b>151</b>
Chapter 14	Sea surface fluxes	153
14.1	Momentum flux (surface stress)	153
14.2	Heat flux	155
14.3	Shortwave radiation flux	156
14.4	Longwave radiation flux	159
14.5	Latent and sensible heat fluxes	159
14.6	Freshwater flux	160
14.7	Treatment in the temperature equation	162
14.8	Treatment in the salinity equation	163
14.9	Bulk transfer coefficient	164
14.10	Specification of input data	171
14.11	Surface data objects	173
14.12	Technical details	175

Chapter 15	Turbulence Closure Models	179
15.1	Statistical closure model	179
15.2	Mellor and Yamada model	180
15.3	Noh and Kim (1999) model	185
15.4	Generic length scale model by Umlauf and Burchard (2003)	188
Chapter 16	Bottom Boundary Layer (BBL)	193
16.1	General description	193
16.2	Grid arrangement and exchanges	193
16.3	Pressure gradient terms	194
16.4	Eddy effects	195
16.5	Usage	196
16.6	Usage notes	197
<b>Part VI</b>	<b>Coupling with other models</b>	<b>199</b>
Chapter 17	Sea ice	201
17.1	Outline	201
17.2	Thermodynamic processes	208
17.3	Remapping in thickness space	221
17.4	Dynamics	224
17.5	Advection and Diffusion	226
17.6	Ridging	227
17.7	Transformation from snow to sea ice (slush ice formation)	230
17.8	Adjustment	232
17.9	Fluxes from sea ice to ocean	232
17.10	Variable salinity of sea ice (v5.1)	233
17.11	Coupling with an atmospheric model	235
17.12	Nesting	237
17.13	Discretization	238
17.14	Usage	241
17.15	Appendix	246
Chapter 18	Tide model	247
18.1	Governing equations	247
18.2	Incorporation of the tidal effects into MRI.COM	249
18.3	Tidal potential	249
18.4	Nesting experiment with tide	250
18.5	Usage	251
Chapter 19	Biogeochemical model	253
19.1	Inorganic carbon cycle and biological model	253
19.2	Governing equations	254
19.3	Carbon cycle component	254
19.4	Obata and Kitamura model	257
19.5	NPZD model	258
19.6	Usage	261
19.7	Program structure	262
Chapter 20	Inert tracers	265
20.1	Ideal age tracer	265
20.2	CFCs	265
20.3	SF <sub>6</sub>	266
Chapter 21	Atmospheric model	267
21.1	Coupling with an atmospheric model	267
21.2	Usage	268

Chapter 22	Nesting	269
22.1	Outline	269
22.2	Grid and Topography	270
22.3	Intermodel transfer	272
22.4	Conservation	275
22.5	Stabilization of parent-child boundaries	279
22.6	Usage	280
 Part VII Miscellaneous		 287
Chapter 23	Basics of the finite difference method	289
23.1	Diffusion equation	289
23.2	Finite difference expressions for time derivatives	290
23.3	Finite difference expression for space derivatives	290
23.4	Finite differencing of advection-diffusion equation	292
23.5	Implicit method for vertical diffusion equation	292
23.6	Evaluation of time-integration methods for wave equations	293
23.7	Evaluation of the time-integration method for advection-diffusion equation	301
Chapter 24	Generalized orthogonal curvilinear coordinate grids	303
24.1	Outline	303
24.2	Generation of orthogonal coordinate system using conformal mapping	303
24.3	Rotation of vector	305
24.4	Mapping a quantity from geographic coordinates to transformed coordinates	306
24.5	Vector operation and differentiation in generalized orthogonal coordinates	308
Chapter 25	User's Guide	311
25.1	Model setup	311
25.2	Preparation of input data files for execution	312
25.3	Restart file	314
25.4	Execution	318
25.5	Monitoring	319
25.6	MRI.COM eXecution Environment (MXE)	320
25.7	Appendix	321
Bibliography		327
Index		333
